

New Specific Cleaning Solutions

Specific Cleaning for Specific Applications

In many applications, electrodes become dirty while being used, with negative results on their efficiency.

Since this dirt is not removed during normal use, special cleaning solutions are needed.

HANNA instruments® has introduced a new line of specific cleaning solutions for eliminating all impurities and residues left on the surface of the electrode when immersed in special samples, such as wines, musts, oils, soil, industrial solutions, grease, and dairy products.

This new "Cleaning" series ensures the maximum efficiency and accuracy of your sensors when used for specific applications.

This line of products is available in 230 and 500 mL bottles, and in 20 mL sachets in 25-piece packages.

The 25-sachet package is a practical and ideal solution for field measurements, because it is easy to handle and always fresh.
