

HI 95715

Ammonia

Ammonia MR Meter with Cal Check™

Ammonia is naturally present in water, as it is a product of the protein microbiological decay of animals and plants.

High ammonia concentrations in surface waters indicate domestic pollution. Moreover, ammonia and its compounds are used as fertilizers.

HANNA instruments® offers HI 95715 to analyze the concentration of total ammonia nitrogen in water between 0.00 to 9.99 mg/L.

The analysis consists of 2 easy to use liquid reagents, supplied with droppers.

Moreover, validating the instrument is possible at any time with the Cal Check™ standard cuvetts.
